This type of fill valve sits at the bottom tank, underwater, and you may not notice it at all when you first open the tank. It uses a diaphragm to sense the water level from the bottom of the tank. This type is well-suited for low-profile toilets because of its small size, but the older models have the potential of siphoning water back into the fresh water supply.

### The Different Types of Toilet Fill Valves or Ballcocks

The toilet fill valve is definitely a higher flow than the standard valve. This does inherently mean that it's quite a bit louder. I had the whole unit changed out in about ten minutes start-to-finish. It helps that I've done this before, but if you've never changed one of these, it's actually quite easy. The instructions are pretty ...
