[EPUB] Organizing The Elements Answer Key The modern periodic table has more than 100 elements, and organizes the elements by atomic number. Because elements are arranged by atomic number, elements with similar properties are located in the same column. Therefore, the properties of the elements on the periodic table repeat at regular intervals.

Unlike Mendeleev, Mosely did not organize elements by increasing atomic masses. Instead, he organized the elements into a periodic table by atomic number. Recall that an element's atomic number is the number of protons in an atom of the element. The new way of organizing did not change the locations of most elements in the periodic table.
