AWS IoT enables secure, bi-directional communication between Internet-connected things (such as sensors, actuators, embedded devices, and smart appliances) and the AWS Cloud over MQTT and HTTP. Developer Guide

AWS IoT Core Documentation - docs.aws.amazon.com

you run a script to mimic multiple sensors publishing messages on an IoT MQTT topic, with one message published every second. The events get sent to AWS IoT, where an IoT rule is configured. The IoT rule captures all messages and sends them to Firehose. From there, Firehose writes the messages in batches to objects stored in S3. In S3, you set up a table in Athena and use QuickSight to analyze ...

Important: This user guide is a part of a series of tutorials originally published in the Microchip IoT Developer Guides repository on GitHub. The repository has more tutorials and information about using a PIC® or AVR® IoT Board with AWS. In this tutorial, it will be showcased how the AVR-IoT

and PIC-IoT Development Boards can be configured to

PIC and AVR IoT

You can access the features that the AWS IoT Core services provide by using the AWS CLI, the AWS SDK for your preferred language, or by calling the REST API directly. We recommend using the AWS CLI or an AWS SDK to interact with AWS IoT Core because they incorporate the best practices for calling AWS services. Calling the REST APIs directly is an option, but you must provide

Connecting to AWS IoT Core service endpoints - AWS IoT

AWS IoT Greengrass also provides a Discovery API, which enables devices to retrieve the information required to connect to the AWS IoT Greengrass core that is in the same Greengrass group as the device. For further information on enabling your device to connect to AWS IoT Greengrass, please follow module 4 in AWS IoT Greengrass developer guide.
