Sacred Texts contains the web's largest collection of free books about religion, mythology, folklore and the esoteric in general.

Chapter 15 Study Guide Sound

The sound pressure level increases by a factor of 10 for every 20-dB increase in sound level. Therefore, 60 dB corresponds to a 1000-fold increase in SPL. 15. Early Detection In the nineteenth century, people put their ears to a railroad track to get an early warning of an approaching train. Why did this work? The velocity of sound is greater in

CHAPTER 15 Sound

Chapter 15: Sound and Doppler Effect So what the actual heck even is sound? No, this isn't the beginning of my really bad stand up routine, it's a legitimate question. Sound is a type of wave energy, that occurs when things vibrate and move through a medium, usually air.

Chapter 15 Study Guide.docx - Chapter 15 Sound and Doppler ...

Figure 15-1 shows a vibrating piston that represents your vocal cords, a loudspeaker, or any other sound source. As it moves back and forth, the piston strikes the molecules in the air. When the piston moves forward, air molecules are driven forward; that is, the air molecules bounce off the piston with a greater velocity.
