Sound and Light Chapter 4 Light and Our World Flashcards ...

The difference between mirror and lens is that mirror means a smooth and highly polished glass surface, through which images are formed by reflection, as the light falls on it. On the other extreme, a lens is a part of transparent refracting medium, (i.e. glass), bounded by two surfaces, of which atleast one is buldged.

Difference Between Mirror and Lens (with Comparison Chart ...

(2) Place an object (a pencil) in front of the mirror and move it towards and away from the mirror. (3) Find the approximate spot where the reflection of the object changes from upright to upside down. This point is the focus of the mirror. Measure the distance between this point and the mirror. This length is the focal length of the mirror.

Numericals on Light Class 10 Science

Chapter 6: Lenses refract light to form images. Lenses ... Lenses have focal points on either side because light shines through either side. ... Uses a concave mirror, plane mirror and a convex lens to collect and focus light from objects at a great distance.
