STOCHASTIC OPTIMAL CONTROL • The state of the system is represented by a controlled stochastic process. • A decision maker is faced with the problem of making good estimates of these state variables from noisy measurements on functions of them. • The process of estimating the values of the state variables is called optimal filtering .

Abstract—The problem of optimal motion planning and control is fundamental in robotics. However, this problem is intractable for continuous-time stochastic systems in general and the solution is difficult to approximate if non-instantaneous nonlinear performance indices are present.
