## **Logic In Access Control**

In computers, logical access controls are tools and protocols used for identification, authentication, authorization, and accountability in computer information systems. Logical access is often needed for remote access of hardware and is often contrasted with the term "physical access", which refers to interactions (such as a lock and key) with hardware in the physical environment, where equipment is stored and used.

Access Control in the 21st century is a paramount to any business, to secure their assets and premises. Physical access control is all about who is on your site, where they are going, and when they are allowed and not allowed to access certain areas and assets. In the past this was accomplished using keys and standard door locks.
