Narrowbanding refers to public safety and industrial/business land mobile radio systems migrating from 25 kHz efficiency technology to at least 12.5 kHz efficiency technology. Narrowbanding is also referred to as VHF/UHF narrowbanding because the frequency bands impacted by narrowbanding are in the VHF/UHF ranges.

In radio  
communications, a  
narrowband channel is  
a channel in which the  
bandwidth of the  
message does not  
significantly exceed  
the channel's  
coherence bandwidth.

# Download Free Narrowband Land Le Radio

In the study of wired channels, narrowband implies that the channel under consideration is sufficiently narrow that its frequency response can be considered flat.

Land Mobile Radio System Operators (both public safety and nonpublic safety) need to aggressively develop a strategy to meet narrowband deadlines to avoid cancellation of existing wideband FCC authorizations.

Most current radio systems use 25 kHz-wide channels. The FCC has mandated that all licensees using 25 kHz radio systems migrate to narrowband 12.5 kHz channels by January 1, 2013. The order affects systems on VHF and UHF channels between 150 and 512 MHz Licensees that do not meet the

deadline face the loss  
of license.

## **Understanding FCC Narrowbanding Requirements**

A common definition (ETSI) of narrowband is when 25 kHz or less is used for the radio channel. The benefit of using a narrow channel is the lower noise bandwidth and hence better sensitivity and range. The advantage of wideband is the

Licensees in the private land mobile VHF and UHF bands traditionally have employed systems that operate on channel bandwidths of 25 kHz. “Narrowbanding” refers to a requirement by the FCC that — on or before January 1, 2013— all existing licensees implement equipment designed to operate on channel

# Download Free Narrowband Land Le Radio Networks

bandwidths of 12.5 kHz or less or that meets a specific efficiency standard (discussed in more detail in Chapter 2).

## **FCC NARROWBANDING MANDATE**

Right now and in the past, the FM land mobile stuff was spaced a certain distance apart. Typical freq was 155.370, .375, etc. Now, to make

# Download Free Narrowband Land Le Radio Networks

more use of the spectrum, they are spacing the freqs much closer, 155.3775, etc. I know, in years past, land mobile was called narrow-band FM.
