From the reviews of Numerical Solution of Partial Differential Equations in Science and Engineering: "The book by Lapidus and Pinder is a very comprehensive, even exhaustive, survey of the subject . . . [It] is unique in that it covers equally finite difference and finite element methods." —Burrelle's

Numerical Solution of Partial Differential Equations in ...

Numerical simulation of partial differential equations is far more demanding than that of ordinary differential equations. Also the diversity of types of partial differential equations precludes the availability of general purpose "canned" computer programs for their solutions.

NUMERICAL SOLUTION OF PARTIAL DIFFERENTIAL EQUATIONS ...

The typical application for multigrid is in the numerical solution of elliptic partial differential equations in two or more dimensions. Multigrid methods can be applied in combination with any of the common discretization techniques. For example, the finite element method may be recast as a multigrid method.

Numerical Solution of Partial Differential Equations: An Introduction (2nd ed.) by K. W. Morton. This is the 2005 second edition of a highly successful and well-respected textbook on the numerical techniques used to solve partial differential equations arising from mathematical models in science, engineering and other fields.

Numerical analysis and computational simulation of partial differential equation models in mathematical biology are now an integral part of the research in this field. Increasingly we are seeing the development of partial differential equation models in more than one space dimension, and it is therefore necessary to generate a clear and effective visualisation platform between the ...

Finding numerical solutions to partial differential equations with NDSolve.. NDSolve uses finite element and finite difference methods for discretizing and solving PDEs. The numerical method of lines is used for time-dependent equations with either finite element or finite difference spatial discretizations, and details of this are described in the tutorial "The Numerical Method of Lines".

We study systems of partial differential-algebraic equations (PDAEs) of first order. Classical solutions of the theory of hyperbolic partial differential equation such as discontinuities (shock and contact discontinuities), rarefactions and diffusive traveling waves are extended for variables living on a surface S , which is defined as solution of a set of algebraic equations ...
