The cabin of the Skymaster may be pressurized to a maximum operating differential pressure of 3.50 PSI with a safety relief pressure differential of 3.50 PSI. This will yield approximately an 11,000 foot cabin altitude at a 20,000 foot cruise altitude. The bleed air system provides a continuous supply of air for pressurization.

selling, don't make a move in the Skymaster market without the knowledge of the Skymaster specialists.

Skymaster Center - Skymaster Cessna Sales

The Cessna 337 Skymaster is arguably the most commercially successful so-called push-pull attempt, at least in terms of numbers built. And although the 337 Skymaster isn't the most popular twin ever marketed, it's done just fine for itself and has achieved its primary goal: eliminating asymmetric thrust and simplifying the pilot's workload in the event of an engine out.

The 337 Super Skymaster was introduced in 1965. The 337 had retractable landing gear and a dorsal air scoop for the rear engine. A turbocharged variant (T337) was introduced in 1966 and a pressurized variant (P337G) was introduced in 1973. Cessna produced civil and military variants of the 337. Reims in France also built several models of the ...
