Finite model theory is the area of model theory which has the closest ties to universal algebra. Like some parts of universal algebra, and in contrast with the other areas of model theory, it is mainly concerned with finite algebras, or more generally, with finite  $\sigma$ -structures for signatures  $\sigma$  which may contain relation symbols as in the following example:

In physical cosmology, cosmic inflation, cosmological inflation, or just inflation, is a theory of exponential expansion of space in the early universe. The inflationary epoch lasted from  $10^{-36}$  seconds after the conjectured Big Bang singularity to some time between  $10^{-33}$  and  $10^{-32}$  seconds after the singularity. Following the inflationary period, the universe continued to expand, but at ...
